## 1 Incastro Connection

### Il sistema di incastro maschio femmina

Male/female embedding system

Le système d'emboitement male/femelle

Sistema de empalme macho/hembra

**Details  
make the difference**

## 2 Ancoraggio Anchorage

### L'ancoraggio delle griglie

The anchorage of the grids

L'ancrage des grilles

Anclaje de las rejillas

### 3 Incastro laterale Lateral connection

#### La predisposizione per l'incastro a 90°

90° embedding presetting

La predisposition pour l'emboîture à 90°

Predisposición para el empalme a 90°

### 4 Collegamento tubi Pipes connection

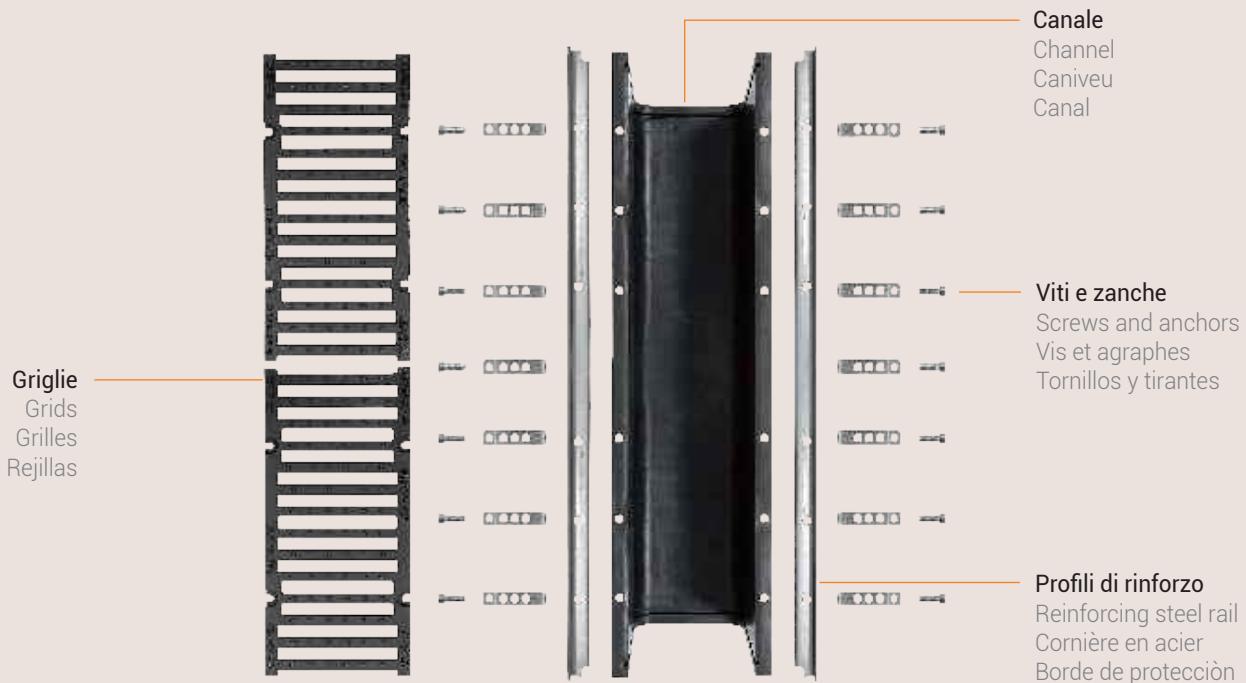

#### Le predisposizioni per il collegamento dei tubi

Preset pipe connections

Les predispositions pour la liaison des tuyaux  
Predisposiciones para el enlace de las tuberías

## Componenti

Components

## Montaggio del canale

Assembly of the channels

- A - **Inserire** i profili di rinforzo di metallo, **piazzare** le griglie (fig.1)
- B - **Avvitare** e serrare viti e zanche (fig. 2), allargare le zanche a 45° (fig. 3)
- C - **Assemblare** fra loro i canali per il tratto che si desidera posare, ogni canale va inserito nel successivo fino a far scattare il dente di battuta (fig. 4)

- A - **Insert** the metal reinforcing rails, **assemble** the grids (fig.1)
- B - **Screw** and tighten the screws and anchors (fig. 2), widen the anchors to an inclination of 45° to the channel (fig. 3)
- C - **Assemble** the channels together for the length desired. Every channel must be inserted into the next one all the way until the lip snaps into place (fig. 4)

- A - **Insérer** les cornières en acier, **placer** les grilles fig.1)
- B - **Visser** et serrer les vis et agrafes (fig. 2), écarter les agrafes à 45° par rapport au caniveau (fig. 3)
- C - **Assembler** les caniveaux entre eux pour la longueur voulue. Chaque caniveau est emboité de manière à ce que ce dernier soit cliqué (fig. 4)

- A - **Insertar** los perfiles metálicos de refuerzo **colocar** las rejillas (fig.1)
- B - **Atornillar** para sujetar las pestañas de sujeción (fig. 2), doblar (fig. 3)
- C - **Ensamar** los diferentes canales entre ellos en el tramo que se desea instalar, cada canal viene insertado al siguiente hasta hacer saltar la pestaña de tope (fig. 4)

fig. 1

fig. 2

fig. 3

fig. 4

- A - Effettuare lo scavo a trincea di dimensioni adeguate (fig. 1), compattare il fondo.
- B - Gettare il letto in calcestruzzo di spessore adeguato (fig. 2).
- C - Posare i canali (fig. 3).
- D - Rinfiancare i lati del canale con idoneo calcestruzzo (vedi composizione del calcestruzzo) dello spessore indicato nelle tabelle di posa (fig. 4), il calcestruzzo deve essere vibrato e rinzaffato con estrema cura, deve riempire tutti gli interstizi ed essere compatto sotto i bordi del canale (fig. 5). Nelle classi di carico più elevate (E600 F900) è consigliabile un'armatura di ripartizione dei carichi.
- E - Quando il calcestruzzo si è solidificato procedere alla stesura della pavimentazione finale in asfalto, massetto o pavé, in questa fase è consigliabile coprire le griglie con della pellicola per evitare di sporcarle.

fig. 1

fig. 2

fig. 3

fig. 4

fig. 5

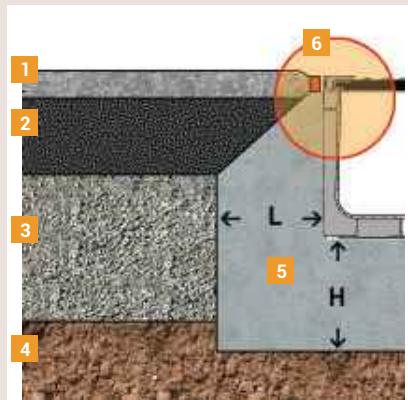

- A - Dig the trench of the proper size (image 1), the land shall be well pressed .
- B - Lay a bed of concrete of the recommended thickness (image 2).
- C - Lay the channel on the ground (image 3).
- D - Apply a lateral backfill onto the channel with suitable concrete and thickness as recommended. (image 4) the concrete should be vibrated and rendered and it should fill in all interstices, in particular behind the support edgings of the grids (image 5). For the heaviest load classes (E600, F900) we suggest reinforcing the concrete with steel rods for better load distribution.
- E - When the concrete is solidified it is possible to proceed with the flooring in asphalt, tiles or paving. During this step is recommended to cover the grids with a plastic film in order not to dirty them.

- A - Effectuer le creusement de tranchée avec les dimensions adéquates (image 1). Le fond doit être compacté.
- B - Couler le lit en béton d'une épaisseur adéquate (image 2).
- C - Poser les caniveaux (image 3).
- D - Remblayer les côtés du caniveau avec du béton (voir composition du béton) de l'épaisseur indiquée dans le tableau de pose (image 4), le béton doit être vibré et crépi avec soin, il doit remplir tous les interstices et être compact sous les bordures de caniveaux. Pour les classes de charges les plus élevées (E600 F900), il est conseillé une armature de répartition des charges (image 5).
- E - Quand le béton est solide procéder au dallage final en goudron, petit rocher ou pavé. A cette phase, il est conseillé de couvrir les grilles avec une pellicule pour éviter de les salir.

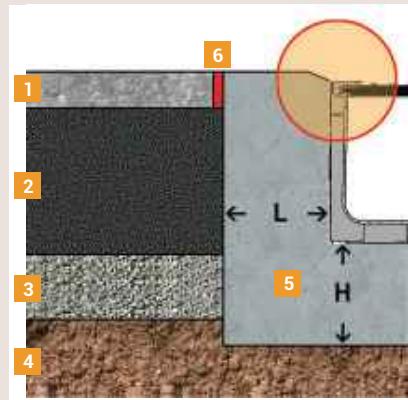

- A - Efectuar la excavación de la rasa con las dimensiones adecuadas (fig. 1), el lecho se debe compactar.
- B - Pavimentar el lecho con l'hormigón con un espesor adecuado (fig. 2).
- C - Posicionar los canales (fig. 3).
- D - Falcar la parte lateral de los canales con el hormigón adecuado (ver composición del hormigón) del espesor indicado en las tablas de instalación (fig. 4), el hormigón tiene que ser vibrado y reforzado con extrema delicadeza, debe llenar todos los espacios y en especial debajo de los bordes del canal (fig. 5). En caso de cargas externas elevadas (E600 F900) es aconsejable una armadura de repartición de la carga.
- E - Cuando el hormigón esta fraguado se procede al extendido de la pavimentación final en asfalto, bordillo o adoquines, en esta fase es aconsejable cubrir la rejilla del canal con un manto de plástico o similar para no ensuciarla.

## Installation

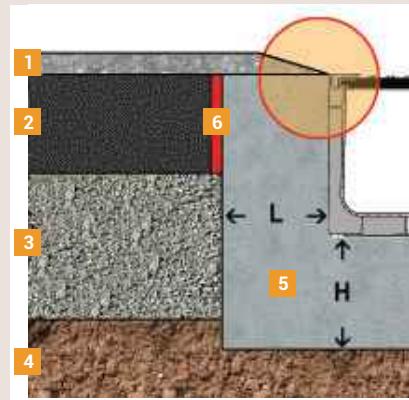

**Posa su asfalto per classi fino a C250**  
Asphalt, load class up to C250

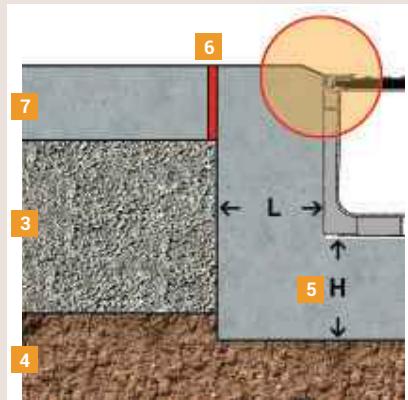

**Posa su asfalto per classi D400-F900**  
Asphalt, load class D400-F900

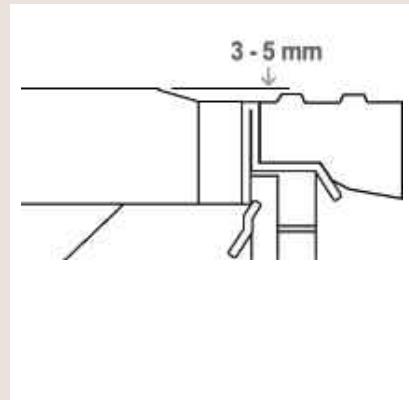

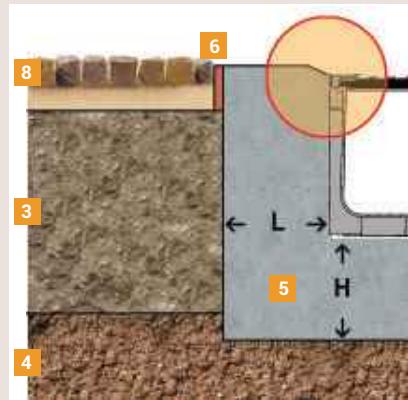

**Posa su asfalto drenante**  
Draining asphalt

**Posa su massetto in calcestruzzo**  
Concrete slab

**Posa su pavè**  
Self paving

- 1** Strato di usura
- 2** Strato inferiore (binder)
- 3** Strato portante
- 4** Terreno di sottofondo
- 5** Rinfianco in calcestruzzo
- 6** Giunto di bitume
- 7** Massetto in calcestruzzo
- 8** Pavimentazione autobloccante

- Wearing asphalt layer
- Lower layer (binder)
- Bearing layer
- Under backfill
- Concrete backfill
- Bitumen joint
- Concrete slab
- Self blocking paving

- Couche d'usure
- Couche inférieure
- Couche porteuse
- Terrain double fond
- Soutien en béton
- Joint en bitume
- Bloc en béton
- Dallage auto-bloquant

- Capa de desgaste
- Capa inferior
- Capa de soporte
- Lecho
- Falcado lateral en hormigón
- Tela asfáltica
- Bordillo en hormigón
- Pavimentaciòn autoblocante

## Installazione

Installation / Installation / Instalacion

Il sistema Canyon è composto da singoli elementi, collegabili fra loro tramite incastro manuale. L'aggancio avviene calando l'elemento superiore su quello inferiore. Il sistema di aggancio a perni consente una rotazione degli elementi da +20° a -20° rispetto l'asse mediano, consentendo adeguare il canyon alla pendenza del terreno dove viene posato.

The Canyon system is made up of individual parts which can be connected together by hand, placing the upper part over the lower one. The jointing system, carried out by means of cylindrical pins, allow the parts to rotate from +20° to -20°, thus allowing the channel system to follow the slope of the land.insertar el accesorio.

Le système Canyon est composé d'éléments singuliers qui sont connectés entre eux à travers d'un ancrage manuel, en mettant l'élément supérieur sur celui inférieur.  
Une rotation des éléments est faisable de +20° à -20°, cela permet d'adapter la pose du système aux variations angulaires du plan de pose.

El sistema Canyon está compuesto por elementos singulares que se conectan entre ellos por medio de conexión manual, bajando la borateja superior sobre la inferior.  
Los pernos cilíndricos permiten una rotación de los elementos desde +20° hasta -20° respecto al eje mediano, permitiendo de adaptar la instalación a las variaciones de la inclinación del terreno.
